admin-panel.php

The php code below is for the admin panel page. The page is divided into two sections, on the left are the "add" options and on the right are the "delete" options. For each option,

```php
<?php
/**
 * Template Name: Admin Panel
 */

//Wordpress function get_header() for styling and Wordpress Database are called here
get_header();
global $wpdb
?>

<!-- Including functions, database connections and header of our site included here -->
<?php
include_once "add/func.php";
include_once "add/conn.php";
include_once "topnav.php";
?>

<!-- To access this page, user needs to be an admin -->
<!--
To add restriction current_user_can() function from Wordpress, which checks if the user is an admin or not.
However, we could only use this function inside PHP which makes the next step really tricky. We cant just use HTML inside PHP,
so to get over this issue we used PHP echo which is usually used for output of a form, we echoe'd the form itself.
 -->
<?php
if( current_user_can('administrator') ) {

	// Center the table
	echo "<center>";

	// Label
	echo '<h4>  Admin Panel </h4>';
	echo '<br>' ;
	echo '<br>' ;

	//  Div is divided to 2 in here, to show 4 different buttons 2 by 2.
	echo '<div class="container">';
		echo ' <div class="row">';
```

there are two buttons. One button is for adding new seeds and the other button is for deleting seeds. The same goes for the units section. There is a button for adding new units and a button for deleting units.

The code includes the WordPress function get_header(), which calls for the styling of the page, as well as the WordPress Database. The code also includes the function current_user_can(), which checks if the user is an administrator or not. If they are not an administrator, they will not be able to access this page.

The CSS styling for the page is also included in the code. The buttons have a green background color and are surrounded by a black border. The font size for the buttons is 10px 24px.

```
<!-- CSS Styling -->
<style>
#optbtn{
    background-color: rgb(6, 180, 6);
    box-shadow: 0 8px 16px 0 rgba(0,0,0,0.2), 0 6px 20px 0 rgba(0,0,0,0.19);
    text-align: center;
    border-radius: 12px;
    font-size: 10px 24px;
    color: black;
    border-color: darkgreen;
    margin-bottom: 10px;
    width: 200px;
}

</style>

<!-- Wordpress function get_footer() is called here -->
<?php
get_footer();
```

The WordPress function get_footer() is also called in the code, which includes the footer of the page.
